Part C Checklist for hydrological report

This form must be accompanied by a brief hydrological report in accordance with the requirements below:

- Map of the underground area of concern including property boundaries and if applicable or if known, boundaries of the aquifer(s) and / or geological formation(s) containing the aquifer(s).
- An estimate of the sustainable yield (in megalitres) of the effected aquifer(s) (if known).
- Overview of existing underground works (including number and location) used by the water service provider for their reticulated water supply.
- Existing extraction rate (megalitres per day) and monthly volumes (megalitres) currently taken from the aquifer(s) by the water service provider for its reticulated water supply.
- Results of bore testing and trends of standing water levels using historical and current records.
- An analysis of any previous bore drilling or hydrological reports that may be available for aquifer(s) in the area of concern. (Applicants may request from their local departmental office any bore drilling reports originally submitted to the department.)
- Details of current restrictions imposed by the water service provider on existing water service customers.
- Assessment of the risks to the reticulated water supply if there is continued use of underground water by persons other than the water service provider.
- Any additional information in support of the application.
