

Using water wisely in your workplace

Saving water is everyone's business – you can save a little, and together we can save a lot!

 Go paperless where possible.

 Scrape dishes instead of rinsing them.

 Only run the dishwasher when full.

 Keep post-workout and after-travel showers to 4 minutes.

 Report dripping taps and running toilets to your building manager.

 Use the half flush option for toilet flushing.

 Stop and think, don't waste water at the sink! 

How much water can you save?

Print less

1 less sheet of A4 paper will save over 2 litres of water.

Stop the drop

A slow dripping tap can drip away 2 buckets of water a day.

Cut back your shower

1 minute less in the shower saves 1 bucket of water. The "bathroom beats" Spotify playlist can help keep your shower to 4 minutes.

Full loads are the way to go

One less wash in the dishwasher will save nearly 2 buckets of water.

Saving water together

If you have 50 people in your workplace and each person saves a little each day by using the half flush, scraping instead of rinsing dishes and turning off the tap while soaping hands... you could **save over 1000 litres in a day.**

Enough to fill 110 buckets!

Have ideas on how we can save water together?
